

Subject: Free Tournament Management Software for Your 2026 Season

Fellow tournament bass angler,

As a bass tournament fisherman, I watched various TDs interact with complex spreadsheets just to enter and manage tournament results, often struggling to report the results, calculate annual standings for AOY/COY, and provide special recognition for other club-related awards with a simple click of a mouse button.

So, I decided to write Windows-based software to do just that. I'm a member of Mohawk Valley Bass Casters in Bristol, CT. I've been working with our Tournament Director to develop Tournament Bass Fishing Software (TBFS). TBFS has completed its preliminary testing. Our club's 2025 season results were entered and verified for accuracy. We are now moving into the beta testing phase, the final phase before commercial release. I'd like to invite your club to participate in the beta testing now as the 2026 season gets underway. When you do, you'll get free use of TBFS for your 2026 season with any support needs or questions a simple email or phone call away! Additionally, as a special thank-you, you'll receive special pricing on your already low-priced license subscription when the software is commercially released, and on our website component when it is launched. All I ask in return is that you let me know if any features need to be added to support how your club manages and reports on tournaments, and ways the current software can be improved. TBFS has had very successful preliminary testing, but if you encounter any problems, let me know immediately, and I will get you an update.

TBFS provides club management, complete tournament management, and a few other features, highlighted below

Tournament Scheduling — plan and manage your full season schedule in one place before the season even begins.

Angler Registration & Management — Members are automatically presented for registration, team pairing, designation of angler and co-angler, and their tournament status is completed in minutes and can be changed right up to the launch!

Tournament Results & Scoring — Enter angler catch data quickly and accurately; results are reported instantly as you enter them. Upon completion, with a click of the mouse, reports on any individual completed tournament or season to date are instantly available. Whether posted on your website or handed out at club meetings, these PDF reports will let every member know where they stand.

Club Membership - Keep your roster organized and up to date, easily retrieve member information, provide special recognition and achievement certificates for lunker and club membership, and foster camaraderie through our automated birthday email feature.

This is tournament bass fishing software written by a tournament bass fisherman. No spreadsheets, no workarounds — just a clean, simple tool that handles the administrative side of running a club so you can focus on fishing. Download the beta documentation from my website www.affordablebusinessolutionsllc.com/tbfs and look it over. Let me know your thoughts.

Hope to hear from you — and tight lines!
